Neath Port Talbot County Borough Council Cyngor Bwrdeistref Sirol Castell-nedd

Democratic Services
Gwasanaethau Democrataidd

Chief Executive: K.Jones

Date: Tuesday, 14 March 2023

Dear Member,

# **GOVERNANCE AND AUDIT COMMITTEE - FRIDAY, 17TH MARCH, 2023**

Please find attached the following urgent item for consideration at the next meeting of the **Governance and Audit Committee - Friday, 17th March, 2023.** 

## **Item**

10 a) Neath Port Talbot Cyber Security Strategy Update 2023 (Pages 1 - 26)

Yours sincerely

Chloe Plowman

p.p Chief Executive

# NEATH PORT TALBOT COUNTY BOROUGH COUNCIL GOVERNANCE AND AUDIT COMMITTEE

## 17 March 2023

Report of the Chief Digital Officer – Chris Owen

**Matter for Information** 

Wards Affected: All Wards

**Neath Port Talbot Cyber Security Strategy Update 2023** 

# **Purpose of the Report:**

1. That the update report be noted.

# **Executive Summary:**

- 2. The Neath Port Talbot County Borough Council (NPTCBC) Cyber Security Strategy has been developed to outline the council's approach to protecting our information systems; the data held within them; and the services they provide, from unauthorised access, harm or misuse. A copy of the strategy is attached at Appendix 1.
- 3. To underpin the delivery and continuous review of the strategy, a multi-year Cyber Security Action Plan has been developed. A copy of the action plan is attached at Appendix 2.

# **Background**

- 4. Since the approval by Members of our council's Cyber Security Strategy in January 2022, the world of cyber security has continued to evolve. Globally healthcare, government systems and critical national infrastructure continue to be a key target, with the goal of using ransomware to extort monies from their victims.
- 5. Following the commencement of the war in Ukraine, there has been an increase in nefarious cyber activity in the war zone that has spilt over into the rest of the world.
- 6. For example, the biggest ever recorded denial of Service attack on Google's infrastructure was a co-ordinated attack from 130 countries, which peaked at 46 million attacks a second<sup>1</sup>.
- 7. In last year alone, the United Kingdom has experienced 63 critical national infrastructure incidents<sup>2</sup>. Closer to home has been the recent cyber-attack on Neath Port Talbot College in December which has caused significant disruption and is still under investigation.
- 8. 82% of attacks involve a human interaction, with the remainder predominantly through compromised partner organisations. Of these attacks, 85% involve users opening infected email attachments, clicking on unsolicited internet links and compromised accounts through insufficient password strength<sup>3</sup>.
- In order to achieve strong cyber security, the council must continue to ensure it promotes a comprehensive risk-based approach, which is integrated across personnel, technical security, information assurance and physical security. It must strategically encompass Information Security, Assurance, Resilience and Governance.

<sup>&</sup>lt;sup>1</sup> ZDNET.com

<sup>&</sup>lt;sup>2</sup> National Cyber Security Centre

<sup>&</sup>lt;sup>3</sup> Verison.com

- To mitigate the growing threat to the council, Digital Services has developed the Cyber Security Action Plan with the following key actions for 2022/23:
  - Introduction of the innovative new Targeted Operating Model (TOM) – Aligning digital services activities with the TOM structure to provide a clear concise approach to continuous improvement.
  - Through new governance arrangements we have established teams to assess and mitigate risks - Define mandatory training requirements and identify and compile performance measures.
  - Policies / procedures As part of the action plan, key policies and procedures have been identified and are being progressed.
  - Plans / Playbooks The Cyber Incident Response Plan and incident playbooks are under review, and where applicable will be updated to align with Council needs, Government & Industry best practice and adapt to the changing threat landscape.
  - Infrastructure updates Migrating to Microsoft Intune as the Authority's Mobile Device Management (MDM) solution, implementation of additional anti-ransomware tools, user access protection systems and commitment to continuous improvement of network security devices.
  - Alignment with wider Government guidance Monitoring advice and guidance from the Welsh and UK Governments, such as the '10 Steps to Cyber Security' issued by the National Cyber Security Centre.
  - Review and alignment with recommendations from the Audit Wales – learning from cyber-attacks report.
  - Roles and responsibilities the key roles / groups identified in 2022 to deliver the strategy have now been set up and appointed.

- 11. The action plan will be used as a tool to measure continuous progress, whilst also allowing us to respond to meet the everchanging challenges that we face.
- 12. Please refer to Appendix 2 Cyber Security Action Plan for further information on progress across each key area.

# **Financial Impacts:**

13. There are no financial impacts associated with this report.

# **Integrated Impact Assessment:**

14. There is no requirement to undertake an Integrated Impact Assessment.

# **Valleys Communities Impacts:**

15. There are no valley communities impacts associated with this report.

# **Workforce Impacts:**

16. There are no workforce impacts associated with this report.

# **Legal Impacts:**

17. There are no legal impacts associated with this report.

# **Risk Management Impacts:**

18. There are no risk management impacts associated with this report.

## Consultation:

19. There is no requirement for external consultation on this item.

#### Recommendation:

20. It is recommended that Members continue to support for the Neath Port Talbot Council Cyber Security Strategy and action plan as set out in Appendix 1 and Appendix 2.

# **Appendices:**

Appendix 1 - NPT Cyber Security Strategy Appendix 2 - NPT Cyber Security Action Plan

# 1. Introduction

We live in a world characterised by interconnecting data, constantly evolving and empowering us to make better informed decisions. Information and data are vital to every part of the work of a Local Authority. As we deliver against the objectives in our <a href="Smart & Connected Digital Strategy">Smart & Connected Digital Strategy</a>, we are transforming the way we work and how our residents, business and wider stakeholders access information and services. As a result, we need increasingly robust security measures to protect against cyber threats.

Across the world, cyber-attacks are growing more frequent and sophisticated. Public sector organisations are not immune to the rise in cyber incidents and when they succeed, the damage can be life-altering, with severe personal, economic and social consequences.

This Cyber Security Strategy sets out Neath Port Talbot County Borough Council's approach to protecting our information systems, the data held within them, and the services they provide from unauthorised access, harm or misuse. This ensures the services we provide are secure and our residents, businesses and wider stakeholders can safely interact with us. It requires a balance of embracing digital opportunities, including making information more widely available and accessible, whilst ensuring that the right levels of protection are in place.

In order to obtain strong cyber security, the Council must ensure it promotes a comprehensive risk-based approach to cyber security, which is integrated across personnel, technical security, information assurance and physical security which strategically encompasses Information Security, Assurance, Resilience and Governance.

This approach is in line with the HMG Cyber Security standard, the Public Services Network (PSN) code of connection and National Cyber Security Strategy of 'Defend, Deter, Develop'.

# 2. Purpose and scope of the strategy

The purpose of this strategy is to give assurance to residents, businesses and other stakeholders of the Council's commitment to delivering robust information security measures to protect resident and stakeholder data from misuse and cyber threats, and to safeguard their privacy through increasingly secure and modern information governance and data sharing arrangements - both internally and with partners. The strategy supports delivery of the wider Digital Strategy by providing a framework for the Council to securely harness the benefits of digital services for the benefit of all stakeholders.

Through delivery of this strategy, we will comply with and embed the principles of 'Cyber Essentials'; a government-backed, industry-supported scheme to help organisations protect themselves against common online threats.

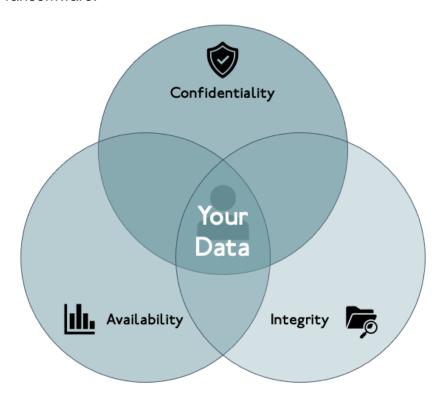

This strategy is intended to cover all partners and customers, the data on the systems we are responsible for and the services they help provide. The recommendations in this strategy will be embedded in all areas of new and emerging technologies which we implement. It will also set out the best practices that will be rooted in our business as usual.

The strategy will sit alongside other Council strategies such as the Information Governance Strategy and is supported by a suite of operational policies (Acceptable usage policy, Information Security Policy, IT Security Policy, Removable Media Policy, Mobile Device Policy and Information Security Breach Policy) and Incident Response Playbooks (Denial of Service, Phishing, Malware etc.)

# 3. Why is Cyber Security Important

Cyber security is the practice of ensuring the confidentiality, integrity and availability (CIA) of information.

- Attacks on Confidentiality stealing or unauthorised copying of personal information.
- Attacks on Integrity seeks to corrupt, damage or destroy information or systems and the people who rely on them.
- Attacks on Availability denial of services, seen in the form of ransomware.

Cyber security refers to the body of technologies, processes, and practices designed to protect networks, devices, programs, and data from attack, damage, or unauthorised access. Cyber security may also be referred to as information technology security.

It is important because, in order to effectively deliver services, we all process and store large amounts of data on computers and other devices, with a significant portion of this data being classified as sensitive information. It will also include financial, personal and other types of information, for which unauthorised access or exposure could have negative consequences.

We transmit sensitive data across networks and to other devices in the course of providing services. Cyber security is the discipline dedicated to protecting this information and the systems used to process or store it. It is everyone's responsibility to ensure that we manage our data appropriately.

Cyber security is also crucial in ensuring our services continue to operate. It is a core element of building and keeping our stakeholders trust. A cyber-attack would potentially have very serious consequences in terms of disruption to our services (many of which serve some of our most vulnerable residents), the Council's reputation and impact to our financial position.

# 4. The challenge we face as a Council

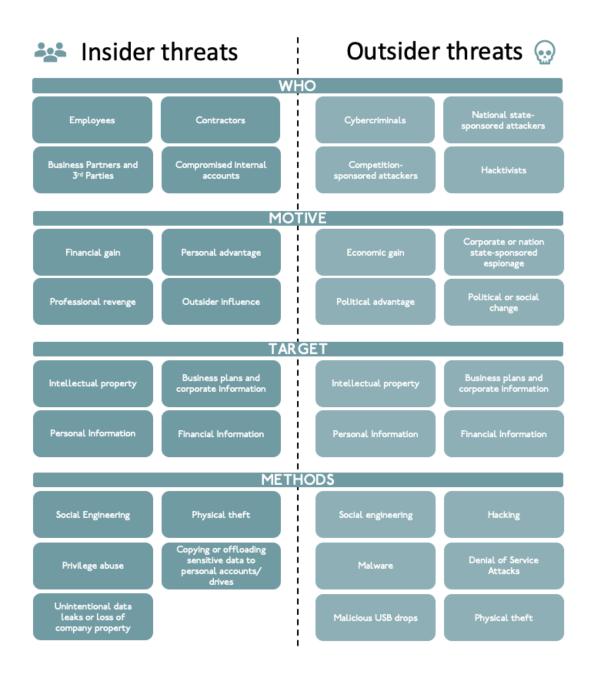

We are using an increasing range of technology, from 'apps' and 'the cloud', to different devices and 'gadgets'. Much of our business is online - corresponding with residents and local businesses, carrying out case work, and reviewing reports and papers for Council meetings.

This direction of travel is expected to continue and accelerate; making effective cyber security ever more crucial in protecting against new types of threats, risks and vulnerabilities.

**Threats -** A threat if left unchecked, could disrupt the day-to-day operations of the Council, and the delivery of local public services.

# Types of Threats

Generally, there are two types of threats. Insider Threats or Outsider Threats they are explained in detail in the diagram below:

## Cyber Criminals and Cyber Crime

Cybercriminals are generally working for financial gain. Most commonly, for the purposes of fraud: either selling illegally gained information to a third party, or using directly for criminal means.

Key tools and methods used by cybercriminals include:

- Malware malicious software that includes viruses, Trojans, worms or any code or content that could have an adverse impact on organisations or individuals.
- Ransomware a kind of malware that locks victims out of their data or systems and only allows access once money is paid.

 Phishing – emails purporting to come from a public agency to extract sensitive information from members of the public.

We have already developed Cyber Incident Playbooks for each of these situations.

## Hacktivism

Hacktivists will generally take over public websites or social media accounts to raise the profile of a particular cause.

When targeted against local government websites and networks, these attacks can cause local reputational damage. If online services are regularly disrupted by cyber-attacks this could lead to the erosion of public confidence in such services.

Hacktivist groups have successfully used distributed denial of service (DDoS) attacks to disrupt the websites of a number of Councils already. (DDoS attacks are when a system, service or network is burdened to such an extent by an electronic attack that it becomes unavailable).

#### Insiders

Staff may intentionally or unintentionally release sensitive information or data into the public domain. This could be for the purpose of sabotage or in order to sell to another party, but more often than not it is due to simple human error or a lack of awareness about the particular risks involved.

Malicious insider threats may include privileged administrative groups.

## Zero Day Threats

A zero-day exploit is a cyber-attack that occurs on the same day or before a weakness has been discovered in software. At that point, it's exploited before a fix becomes available from its creator. It is an attack that exploits a previously unknown security vulnerability.

This poses a risk to any computer or system that has not had the relevant patch applied or the relevant updates to its antivirus software.

## **Physical Threats**

The increasing reliance on digital services brings with it an increased vulnerability in the event of a fire, flood, power failure or other disaster (natural or otherwise).

#### **Terrorists**

Some terrorist groups demonstrate intent to conduct cyber-attacks, but fortunately have limited technical capability. Terrorist groups could obtain improved capability in a number of ways, namely through the sharing of

expertise in online forums providing a significant opportunity for terrorists to escalate their capability.

## Espionage

Several of the most sophisticated and hostile foreign intelligence agencies target UK government and public sector networks to steal sensitive information. This could ultimately disadvantage the UK in diplomatic, trade or military negotiations.

#### **Vulnerabilities**

Vulnerabilities are weaknesses or other conditions in an organisation that a threat actor; such as a hacker, nation-state, disgruntled employee, or other attacker, can exploit to adversely affect data security.

Cyber vulnerabilities typically include a subset of those weaknesses and focus on issues in the IT software, hardware, and systems an organisation uses.

## System Maintenance

IT systems should be updated and checked regularly and effectively. It is essential that the systems are fully updated and appropriate fixes are applied. Poor setup, mismanagement, or other issues in the way an organisation installs and maintains its IT hardware and software components is a threat.

## Legacy Software

We must ensure that legacy systems have sufficient user and system authentication, data authenticity verification, or data integrity checking features that prevent uncontrolled access to systems.

# Training and Skills

It is crucial that all employees have a fundamental awareness of cyber security. Accountable managers are responsible for ensuring all their employees have completed the appropriate training.

### **Assets**

We regularly review the value of all assets across the Council in line with legislative requirements, to ensure that the appropriate levels of protection are placed around those digital and physical assets. Our assets include:

- Data
- Services
- Infrastructure

#### **Risks**

Cyber Risk Management is a fundamental part of the broader risk management. It ensures cyber security challenges are fully identified across the Council and appropriate action is carried out to mitigate the risk, but also to develop effective recovery and containment procedures in the event of an incident.

# 5. Our approach, principles and priorities

To mitigate the multiple threats we face and to safeguard our interests, we need a strategic approach that underpins our collective and individual actions in the digital domain over the coming years. This will include:

- Fostering a culture of empowerment, accountability and continuous improvement.
- Prioritising information assets and processes, maintaining appropriate records and policies and conducting regular reviews including data retention policies.
- Ensuring adequate procedures and plans are in place to recover and quickly identify exposure.
- Embedding a Council wide risk management framework to help build a risk aware culture, ensuring staff understand how to identify and manage risks.
- Delivering Information Security Awareness training and principles to help mitigate insider threats, understand supply chain risks and ensure all staff understand the issues and their responsibilities.

The diagram below shows the continual cycle for protecting the Council and its service users from cyber-attacks:

# Identify

- Identify and catalogue sensitive information and key operational services.
- Understand and manage user access to key operational services.
- Review through Information and Cyber Security Governance Processes.

#### **Protect**

- Access to sensitive information and key operational services shall only be provided to identified, authenticated and authorised users or systems.
- Systems which handle sensitive information or key operational services shall be protected from exploitation of known vulnerabilities.
- High privileged accounts shall not be vulnerable to common cyberattacks.

#### **Detect**

- Steps are taken to detect cyber-attacks.
- · Monitor key areas and activities.

# Respond

- A rapid response to incidents.
- A defined, planned and tested response to security incidents that impact personal, sensitive or confidential information, leveraging a multi-disciplinary response team.

#### Recover

- Identification and testing of contingency mechanisms to ensure critical service delivery continues.
- Restoration of services to normal operation.
- Lessons learned fed back into the process.

# 6. Implementation Plan

To adapt to the changing landscape and achieve our vision we will align with the National Cyber Security Strategy's approach to defend the Council, residents, businesses and wider stakeholders, deterring potential threats and developing our capabilities – Defend, Deter and Develop.

#### Defend

The Council will further develop the means to defend against evolving cyber threats, to respond effectively to incidents, and to ensure networks, data and systems are protected and resilient. It includes helping our residents, businesses and partners in gaining the knowledge and ability to defend themselves.

# Actions:

- Maintaining firewalls and scanning services.
- Continue to develop end-point protection (Anti-Virus, USB Encryption and MDM).
- Carrying out health checks, penetration test and cyber resilience exercises to test their systems and processes, e.g. Web Check – a website configuration and vulnerability scanning service, developed with a number of public sector organisations including Councils. This is free to use and available to all public sector organisations.
- Meeting compliance regimes, Code of Connection (CoCo) which require good cyber hygiene, to connect to government private networks, e.g. Public Sector Network (PSN).
- Working with partners across the public sector through participation in Cyber Security Information Sharing Partnership (CiSP), Warning, Advice and Reporting.

# **Deter**

The Council will be a hard target for all forms of aggression in cyberspace. This will involve detecting, understanding, investigating and disrupting hostile action against the Council.

#### Actions:

#### Governance

- Applying government's cyber security guidance, e.g. 10 Steps to Cyber Security or Cyber Essentials.
- o Review (update where appropriate) policies and procedures.

## Technology and information

- Ongoing review of network security.
- Users with wide ranging or extensive system privilege shall not use their highly privileged accounts for high-risk functions, in particular reading email and web browsing.
  - Multi-factor authentication shall be used where technically possible, such as where administrative consoles provide access to manage cloud based infrastructure, platforms or services.
  - Multi factor authentication shall be used for access to enterprise level social media accounts.
  - Passwords for highly privileged system accounts, social media accounts and infrastructure components shall be changed from default values and shall not be easy to guess. Passwords which would on their own grant extensive system access, should have high complexity.
- Malware prevention.
- o Removable media controls.
- Secure by design configuration.
- Review and update plans and guidance.
- Training or educating users to help detect, deter and defend against the cyber threats.

# **Develop**

The Council will continually develop this innovative cyber security strategy to address the risks faced by our residents, businesses and wider stakeholders.

This includes developing a co-ordinated and tailored approach to risks and threats that we may encounter and mitigate potential vulnerabilities.

### Actions:

- Develop and maintain risk management framework, internal control and governance for the prevention and detection of irregularities and fraud
- Process, procedures and controls to manage changes in cyber threat level and vulnerabilities.
- Managing vulnerabilities that may allow an attacker to gain access to critical systems.
- Operation of the Council's penetration testing programme; and Cyberincident response.
- Training for staff and elected members.
- Develop an incident response and management plan, with clearly defined actions, roles and responsibilities.
- Develop a communication plan in the event of an incident which includes notifying (for example) the relevant supervisory body, senior accountable individuals, the Departmental press office, the National Cyber Security Centre (NCSC), Government Security Group (Cabinet

- Office), the Information Commissioner's Office (ICO) or law enforcement as applicable.
- Develop a network of sharing with other Councils, collaborate and learn from each other, harness networks such as, WARP and CiSP.

## 7. Critical Success Factors

Throughout this period of challenging transformation, the Council has committed to delivering robust information security measures to protect residents and stakeholder data from misuse and cyber threats, and to safeguard their privacy through increasingly secure and modern information governance and data sharing arrangements both internally and with partners.

To continue to provide assurance on the effectiveness and robustness of the Council's arrangements for information security, the Council will:

- Develop appropriate cyber security governance processes.
- Develop a Council wide Cyber Risk Management Framework.
- Develop policies/procedures to review access on a regular basis.
- Create a cyber-specific Business Continuity Management Plan and/or review our Incident Plan to include emergency planning for cyberattack.
- Develop an incident response and management plan, with clearly defined actions, roles and responsibilities. A copy of all incidents shall be recorded regardless of the need to report them.
- Set up a Playbook to have test incidents on a regular basis; to ensure reaction to incidents where an incident is triggered.
- Create standard test plans with security testing as a standard.
- Reconcile current systems in place and last times these were reviewed (build into Enterprise Architecture).
- Review vendor management process of assessments of third parties.
- Explore Active Cyber Defence tools and new technologies to ensure we have the best solutions to match to threats.
- Apply the Government's cyber security guidance 10 Steps to Cyber Security.
- Provide relevant cyber security training for staff and elected members.
- Apply a regular schedule of cyber exercises, within the wider cycle of multi-agency incident response and recovery exercises.
- Comply with the Governments Public Sector Network (PSN) Code of Connection and Payment Card Industry (PCI) standards; a minimum requirement for all systems used, audit trails, deletion of data etc.
- Protect enterprise technology by working with specialist partners to develop model architecture and review audit logs to reduce chances of threats.

# 8. Cyber Security Governance - Roles and Responsibilities

Effective cyber security governance at the Council is delivered through the following roles and functions.

# **Senior Information Risk Owner (SIRO)**

The Council's nominated Senior Information Risk Owner (SIRO), is the Chief Digital Officer. The SIRO is responsible for the governance of cyber security and information risk within the Council. This includes ensuring that information governance risk is managed in accordance with legal requirements.

However, whilst the SIRO is the nominated officer, responsibility for safeguarding information and information systems is shared across the organisation with all users having a role to play.

# **Corporate Director's Group (CDG)**

CDG will take an overview of the Cyber Security Strategy via regular updates from the SIRO, where progress and risks are reported.

#### **Corporate Governance Group**

The Corporate Governance Group will have reporting and monitoring oversight of Cyber Security threats that have been experienced across the Council. They will also deal with any Cyber Security escalation matters.

## **Information Security Group (ISG)**

The group is comprised of senior representatives from each service area. The group are responsible for overseeing the delivery of the Information, Cyber Security and related Strategies and monitoring their effectiveness.

## **Data Protection Officer (DPO)**

The Council's Data Protection Office (DPO), is the Head of Legal and Democratic Services. The DPO leads on overseeing the Council's implementation of data protection legislation (UK GDPR and the Data Protection Act 2018). They take an assurance view that progress is being made in adoption and implementation of the Cyber Security Strategy, and commission the undertaking of Audits of Information Security as appropriate.

## **Security and Operations Team**

The Security team will lead on the implementation of the Cyber Security Strategy, preparing regular feedback and updates not only on progress regarding implementation of the tasks identified but also provide an informed view of the threat landscape overall.

#### **Information Governance Team**

The Information Governance team will lead on information security incident investigations that are not serious cyber security incidents which are dealt with under the cyber incidence response plan and hold the corporate information security incident register.

The team will be part of all initiatives to provide information security, data protection and information management advice and recommendations ensuring that potential issues are identified and escalated to the relevant area.

# **Information Asset Owners**

Information Asset Owners are responsible for all processing of personal data within their business unit/service area. They are identified by the Information Governance team.

#### All Council staff / users and Elected Members

It is the responsibility of all staff / users and Elected Members to comply with the standards set out in this Cyber Security Strategy and within supporting Policies, such as, but not limited to Members ICT Scheme, Information Security and Acceptable Usage Policy.

# **Appendix A: Standards**

Information Security Management within Neath Port Talbot County Borough Council will comply with appropriate standards. These include the Governments' Cyber Essentials certification for Cyber Security, the Public Services Network Code of Connection and PCI DSS.

The standard specifies requirements for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a documented information security management system (ISMS) within the context of the Council's overall business risks. It specifies requirements for the implementation of security controls customised to the needs of the Council.

# **Appendix B: NCSC: 10 Steps to Cyber Security**

# **Risk Management Regime**

Embed an appropriate risk management regime following standards, across the organisation. This should be supported by an empowered governance structure, which is actively supported by the board and senior managers. Clearly communicate your approach to risk management with the development of applicable policies and practices. These should aim to ensure that all employees, contractors and suppliers are aware of the approach, how decisions are made, and any applicable risk boundaries.

# **Secure configuration**

Having an approach to identify baseline technology builds and processes for ensuring configuration management can greatly improve the security of systems. You should develop a strategy to remove or disable unnecessary functionality from systems, and to quickly fix known vulnerabilities, usually via patching. Failure to do so is likely to result in increased risk of compromise of systems and information.

# **Network security**

The connections from your networks to the Internet, and other partner networks, expose your systems and technologies to attack. By creating and implementing some simple policies and appropriate architectural and technical responses, you can reduce the chances of these attacks succeeding (or causing harm to your organisation). Your organisation's networks almost certainly span many sites and the use of mobile or remote working, and cloud services, makes defining a fixed network boundary difficult. Rather than focusing purely on physical connections, think about where your data is stored and processed, and where an attacker would have the opportunity to interfere with it.

## Managing user privileges

If users are provided with unnecessary system privileges or data access rights, then the impact of misuse or compromise of that users account will be more severe than it need be. All users should be provided with a reasonable (but minimal) level of system privileges and rights needed for their role. The granting of highly elevated system privileges should be carefully controlled and managed. This principle is sometimes referred to as 'least privilege'.

### User education and awareness

Users have a critical role to play in their organisation's security and so it's important that security rules and the technology provided enable users to do their job as well as help keep the organisation secure. This can be supported

by a systematic delivery of awareness programmes and training that deliver security expertise as well as helping to establish a security-conscious culture.

# **Incident management**

All organisations will experience security incidents at some point. Investment in establishing effective incident management policies and processes will help to improve resilience, support business continuity, improve customer and stakeholder confidence and potentially reduce any impact. You should identify recognised sources (internal or external) of specialist incident management expertise.

## **Malware prevention**

Malicious software, or malware is an umbrella term to cover any code or content that could have a malicious, undesirable impact on systems. Any exchange of information carries with it a degree of risk that malware might be exchanged, which could seriously impact your systems and services. The risk may be reduced by developing and implementing appropriate anti-malware policies as part of an overall 'defence in depth' approach.

## Monitoring

System monitoring provides a capability that aims to detect actual or attempted attacks on systems and business services. Good monitoring is essential in order to effectively respond to attacks. In addition, monitoring allows you to ensure that systems are being used appropriately in accordance with organisational policies. Monitoring is often a key capability needed to comply with legal or regulatory requirements.

## Removable media controls

Removable media provide a common route for the introduction of malware and the accidental or deliberate export of sensitive data. You should be clear about the business need to use removable media and apply appropriate security controls to its use.

## Home and mobile working

Mobile working and remote system access offers great benefits, but exposes new risks that need to be managed. You should establish risk based policies and procedures that support mobile working or remote access to systems that are applicable to users, as well as service providers. Train users on the secure use of their mobile devices in the environments they are likely to be working in.

	ID	Area	Observation	Action - quick win	Action - longer term	% Complete	Expected Competion Date
	AP - 1	Defend / Technology	Maintain firewall and scanning services.	Maintenance of current infrastructure and services.	Migration to virtual firewall to enhance functionality and management.	67%	Apr-23
	AP - 2	Defend / Technology	Maintenance of end-point protection for devices – Anti Virus, USB Encryption and Mobile Device Management.	Maintenance of current endpoint protection.	Consolodation of endpoint protections as part of planned move to enhanced Microsoft licencing	50%	Estimated End 2023
	AP - 3	Defend / Technology	Undertake Cyber Security Health Checks and Penetration Testing.	Maintain the programme of quaterly vulnerability scans of the server suite and rolling programme of workstation scans.	Establish schedule of independent health checks.	33%	Sep-23
	AP - 4	Defend / Technology	Utilisation of the National Cyber Security Centre tools. WebCheck and Mail Check.	Migration to MyNCSC platform and configuration of services	Exploitation of enhanced features available within MyNCSC	67%	Apr-23
	AP - 5	Defend / Governance	Meet compliance regimes which require good Cyber Hygiene (Public Service Network Code of Connection, Cyber Essentials).	Maintain current compliance with Public Service Network and Cyber Essentails.	Development work to move to Gov.Pay platform to harmonise payment processing on secure government platform.  Extension of current Cyber Essentials into Cyber Essentials Plus and Cyber Essentials Governance	33%	end of 2023
	AP - 6	Defend / Governance	Be an active member of the public sector cyber security community. Participation in the Cyber Security Information Sharing Partnership (CiSP) and Wales Local Authority Warning, Advice and Reporting Point.	Expansion of Welsh WARP membership to include relevant internal stakeholders	Active presence in wider cyber community events	67%	Ongoing commitment
Page	AP - 7	Deter / Technology	Users with wide ranging or extensive system privilege shall not use their highly privileged accounts for high-risk functions.	Identification and remediation of less secure authentication. Expansion of seperation of duties - privileged accounts used solely for adminstrative functions	Review of standard accounts with enhanced privieges.	50%	End of 2023
25	AP - 8	Deter / Technology	Reconcile current systems in place and last times these were reviewed.	Identiy high risk systems and undertake a scoping review to provide an interim assessment.	Scheduled annual review of existing systems to be setup and ongoing identification and creation of new guidance.	25%	Mar-24
	AP - 9	Deter / Technology	Protect enterprise technology by working with specialist partners to develop model architecture.		Where necessary engage consultants with specialist expertise to advise on specific areas while internal capacity is being developed	0%	Apr-23
	AP - 10	Deter / Technology	Multi-factor authentication shall be used where technically possible, such as where administrative consoles provide access to manage cloud based infrastructure, platforms or services.	Implemented as a requirement in all new systems	Review of existing systems to identify where MFA is not in place but can be in order to address these.	50%	Mid 2024
	AP - 11	Deter / Governance	Embed the Secure by Design principle throughout.	Regular Digital Team 'Stand Ups' raising awareness of workstreams and providing a coherent approach to bridge until Solutions Board in place.	Full initiation of Solutions Board to ensure all development follows the Target Operating Model, including Secure by Design and Privacy by Design	50%	Apr-23
	AP - 12	Deter / Governance	Review vendor management to address supply chain risk.	Refine current process of System Assessments and IG processes for Third Party management.	Development of NPT Supply Chain Strategy and associated policy and process/procedure.	50%	Mid 2024
	AP - 13	Deter / Governance	Review (update where appropriate) policies and procedures.	Body of work required to review and update (new posts filled etc)	Scheduled annual review to be setup	33%	Mid 2024
	AP - 14	Develop / Technology	Explore Active Cyber Defence tools and new technologies to ensure we have the best solutions to match to threats.	· ·	Identify and test further ACDT with a view to implementing into the digital estate.	50%	On hold pending WG SOC review

Engage in funded "Excercise in a box" opportunity.

Develop a scheduled programme of internal

exercises.

Pending WG

direction

33%

Apply a regular schedule of cyber exercises, within the

wider cycle of multi-agency incident response and

recovery exercises.

**Action Plan - Cyber Security Strategy Update** 

AP - 15 Develop / Technology

Action Plan - Cyber Security Strategy Update									
ID	Area	Observation	Action - quick win	Action - longer term	% Complete	Expecte Competion Date			
AP - 16	Develop / Governance	Provide relevant cyber security training for staff and elected members to help detect, deter and defend against the cyber threats.	Report on current statistics of staff e-learning compliance. Awareness of Member e-learning to be raised and completion reported on.
